[^0]2. Power on Continuous Program is defined as 3 dB greater than the Nominal rating.
3. Applied RMS Voltage is set to 2.83 V for 8 ohms Nominal Impedance.
4. Thiele-Small parameters are measured after a high level 20 Hz sine wave preconditioning test.

Frequency Response ( $2,83 \mathrm{Vrms} / 1 \mathrm{~m}$ )

[^0]:    1. 2 hours test made with continuous pink noise signal ( 6 dB crest factor) within the range $\mathrm{Fs}-10 \mathrm{Fs}$. Power calculated on rated minimum impedance. Loudspeaker in free air.
